

ZOLL**AED Plus®****A:** Semi-automatic**B:** Fully-automatic**More than a defibrillator. A full-rescue AED.**

- Suitable for use by rescuers with minimal training and also BLS and medical trained professionals
- Provides real time feedback on the rate and depth of chest compressions using ZOLL's unique Real CPR Help® technology, clinically proven to significantly improve the survival rates from cardiac arrest**
- Supports the UK Resuscitation Council's entire Chain of Survival, with easy-to-understand audio prompts and illustrations
- Once installed, the AED Plus has the lowest total cost of ownership. Unless used, there is nothing to replace or buy for five years
- Easy to place one piece electrode providing more time to focus on the rescue
- Intelligent paediatric capability automatically analyses a child's ECG when paediatric electrodes are connected
- The specially designed lid for the AED Plus can be placed under the shoulders of the patient to help maintain an open airway
- Automated self testing every 24 hours to ensure a constant state of readiness
- Powered by 10 x CR123A lithium Duracell or Sanyo batteries with redundant battery circuitry so if one fails the other will kick in
- Seven year warranty (five years as standard, two years free upon registration of device).

Contents: Defibrillator, soft carry case, ten batteries, CPR-D-padz electrodes with first responder kit, instructional training DVD and operator's guide.

Defibrillators

First aid training

AED training in action

Automated external defibrillation (AED)

While defibrillator units are very simple to operate, and no previous first aid training is required, this four-hour course gives people the confidence to act quickly and effectively in an emergency. Crucially, this course will teach your defibrillator operators how to perform effective CPR.

Course duration: Four hours

Certification: One year

First aid at work (FAW) courses do not cover the use of defibrillators.

If you decide to provide a defibrillator in your workplace, it is important that those who may use it are appropriately trained.

Your AED Shelf life

Your AED battery and pads have shelf lives. It's important to know when to replenish these so you never have a possibility of it not working when you need it most.

Recycling your old batteries

It is recommended that all batteries are disposed of safely (not in household waste); most local supermarkets have a used battery collection point. Or contact your local council for advice on the safe disposal of used batteries in your area.

How to use a defibrillator

How to... ...use a defibrillator

All the automated external defibrillators in our product range are extremely easy to use. With effective CPR, defibrillation could be the difference between life and death.

- Automatically diagnoses cardiac arrhythmias and either automatically delivers a shock or prompts the user to press the shock button
- Clear instructions with voice prompts
- Reliable and technologically advanced portable device that cannot cause any further harm to the casualty.
